

Mahsa Nasiry

Junior Front-End Developer

Tehran, Iran • mahsanasiry0@gmail.com • github.com/mahsanasiry • linkedin.com/in/mahsa-nasiry0 • mahsanasiry.github.io

PROFILE

Junior front-end developer focused on building responsive, accessible and user-friendly web applications. Experienced through hands-on projects with React, Next.js, TypeScript and modern CSS. Strong interest in clean UI architecture, practical problem solving, accessibility, testing and polished user experiences. Currently seeking a first professional front-end opportunity where I can contribute to real products and continue growing.

TECHNICAL SKILLS

Languages	HTML, CSS, JavaScript, TypeScript
Frameworks	React, Next.js, Tailwind CSS
Data & forms	TanStack Query, React Hook Form, Zod, REST APIs
Testing	Vitest, React Testing Library, axe-core
Tools	Git, GitHub, GitHub Actions, VS Code, npm
Practices	Responsive design, accessibility, semantic HTML, SEO, client-side state, API integration

SELECTED PROJECTS

SkillSwap — Next.js • React • TypeScript • Tailwind CSS • TanStack Query • Zod

Peer-to-peer skill exchange platform that helps users discover compatible people and exchange knowledge.

- Built discovery with search, filtering, sorting, pagination and URL-persisted query state.
- Implemented match scoring, profiles, favorites, dashboards and validated skill-swap request flows.
- Added accessible interactions, responsive UI and automated testing with Vitest, React Testing Library and axe-core.
- Deployed as a static Next.js application with GitHub Actions; mock REST API and demo-user flows support the product experience.

JobTrail — Next.js • TypeScript • Tailwind CSS

Job application tracker for organizing applications, follow-ups and weekly job-search goals.

- Implemented create/edit/manage flows with statuses, tags, dates, notes, search, filtering and sorting.
- Added weekly goal tracking, follow-up reminders, dark mode, CSV export and validated JSON backup/restore.
- Focused on accessible interactions, reliable client-side data handling and automated validation/testing.

Taskboard — React • TypeScript • Tailwind CSS

Responsive Kanban board with browser persistence and keyboard-friendly task interactions.

- Built native drag-and-drop interactions without a third-party drag-and-drop library.
- Used useReducer for predictable state management with search, priority filtering and overdue dates.
- Added a move menu for touch and keyboard users.

Weather Desk — Next.js • TypeScript • Open-Meteo API

Weather dashboard with live conditions, hourly temperatures and a 7-day forecast.

- Implemented debounced search with live suggestions, loading/error states and cancellation of outdated requests.
- Built the hourly temperature chart with plain SVG and added unit switching plus saved favorite cities.

ADDITIONAL

Open to remote junior front-end roles and freelance projects. Languages: Persian and English. Portfolio: mahsanasiry.github.io
